

Growing Containers

Gardening card 2

If you wish to grow vegetables or flowers and either do not have a garden or have any plant pots to get you started this is not a problem. There are plenty of alternatives to get plants growing.

All it takes it is to think outside the box. I will only give you ideas about containers and not about specific use for them now. But know that it is possible to build complete gardens in small places for example with bottles of water and few strings!

There are just a few things that can be recycled into plant pots either to make seedlings or grow full plants:

- Plastic cups and containers for sprouts
- Plastic bottles and bags for vegetables
- Tins for flowers and bulbs
- Coffee cups for flowers & vegetables
- Jars for flowers and vegetables
- Egg boxes for seedlings
- Yogurt pots for seedlings
